

Wasted Potential: Agile Standup and Retrospective Meetings

Agile Standup:

1. What have you completed since the last meeting?
 - Split up into groups for front and backend development
 - Looked into database development and optimal programming tools to create them
 - Determined all of the features to be included in the calendar
 - Assigned team members to complete individual tasks
2. What will you complete before the next meeting?
 - Start designing database as well as website
 - Get low level working code for both front and backend of the calendar
 - Create a GUI for the website, for example a login page
 - Layout a calendar view using HTML
3. What obstacles have you been facing?
 - Overall, our group is relatively inexperienced, so we will have to learn a lot of new things in order to make this work. It looks like it may be challenging at times but it will also be a lot of fun.
 - Linking the front and backend portions of the project together
 - Getting familiar with group code development through github
 - Finding set meeting times

Sprint Retrospective Meetings:

1. What went well?
 - a. Everyone completed the required tasks from last meeting
 - b. Team is very coordinated on what needs to be completed
2. What didn't go well?
 - a. Could have been more ahead of milestones and starting actual coding for project. Past sprint could have been better defined.
3. What should be improved upon for the next sprint?
 - a. Have low level code that works
 - b. More defined goals
 - c. Sub-team productivity, more work outside of the set team meetings
