Instructions for running:

- Install mongo and node js
- All the modules should be included in git, so no need to run npm install, if missing module for some reason, npm install it
- Run command “node index.js” and you should see output of “hey hi the server started” which means you got it running
- Visit <http://localhost:8000/website/register.html> to register an account or <http://localhost:8000/website/login.html> to login

Instructions for testing:

- “npm install jest”
- “npm run test”
